Check

 Check optional, if Mechanical, Electrical, or Accumulator Inspection at FSA, FSCH, FSN, FSPL, or FSPT is passed

NOTES:

- This form must stay with the push bar at all times!

- Technical inspection approval voids if inspection sheet is lost.

- If there is a conflict between this form and the rules, the rules prevail.

Present the vehicle for inspection in the following order:

Pre-Inspection

Accumulator Inspection*

Electrical Inspection*
Driverless Inspection*
Mon 04:00-05:45

Mon 06:00-07:40
Mon 08:00-09:15
Driver Egress
Mon 09:30-10:00

2. Rain Test*

3. Brake Test*

4. Emergency Brake System Test*

* the vehicle is marked with a sticker if this part has been passed successfully.

DRIVERLESS - copy for Formula Student Germany

☐ OPEN ACCUMULATOR CONTAINER

- ▶ Open container housing, remove maintenance plugs.
- Check if no voltage is present.

► Get mechanical inspector for ASES checks.

☐ ASSEMBLY

- 59 All components and parts of the accumulator container need to be properly fixed.
- 60 TS potentials are insulated against inner wall of accumulator container if container made from conductive material.
- 61 \bigcirc A minimum of $30\,\%$ of cells are monitored with temperature sensors.
- 62 \bigcirc Every temperature sensor placed on negativ terminal of monitored cell or in $<\!10\,\mathrm{mm}$ distance on busbar.
- 63 O No cells are damaged or can be damaged by the segment structures.
- 64 O No soldering in high current path
- 65 Cevery container contains at least one appropriately sized and rated fuse.
- 66 Cevery container contains at least two appropriately sized and rated isolation relays (current and voltage).
- 67 O Isolation relays and fuses are separated from cells by barrier

- according UL94-V0 or equivalent.
- 68 O Pre-charge relay is of mechanical type with appropriate voltage rating.
- 69 Maintenance plugs are located at both poles of each stack (including first and last stack).
- 70 Maintenance plugs removable without tools.
- 71 O Maintenance plugs have positive locking mechanism.
- 72 Maintenance plugs must not be able to unintentionally create circuits or short circuits.
- 73 \bigcirc Stacks separated by Maintenance plugs $\leq 120 \,\mathrm{V\,DC}$.
- 74 \bigcirc Stacks separated by Maintenance plugs $\leq 6\,\mathrm{MJ}.$
- 75 Stacks are insulated and separated by a fire resistant barrier according to UL94-V0 for min. used thickness or equivalent.
 - ▶ Check opening in TS enclosures, try to reach TS potentials with insulated test probe $(100\,\mathrm{mm}$ length, $6\,\mathrm{mm}$ diameter).
- 76 O If fully closed, equalizing valve implemented.

☐ WIRING

- 77 O All TS wires have proper overcurrent protection.
- 78 O No other wires than TS wires are orange.
- 79 \bigcirc Securely anchored to withstand at least $200\,\mathrm{N},$ if outside of enclosure.
- 80 O Located out of the way of possible snagging or damage.
- 81 O TS and LV wires separated (not valid for Interlock).
- 82 \bigcirc Every wire used in the Accumulator container (TS and LV) is rated for ${>}604.8\,\mathrm{V}$ $^3.$
- 83 \bigcirc Possible to clearly assign and prove gauge, temperature and

- voltage rating of TS wires.
- 84 O Positive locking mechanism or if no positive locking possible, automotive certified components.
 - Check if insulated tools needed for the assembly of certified components are available
- 85 O Insulation is not only insulating tape or rubber-like paint.
- 86 O IMD is integrated into the charging system
- 87 One IMD ground line is connected to the accumulator container and one ground line is connected to the charger casing by a separate wired connection

☐ ACCUMULATOR MANAGEMENT SYSTEM

- ► Disconnect AMS current sensor connector
- 88 \bigcirc The AMS must open the shutdown circuit within $0.5 \, \mathrm{s}$.
 - ► Disconnect any other AMS internal connector
- 89 \bigcirc The AMS must open the shutdown circuit within $1\,\mathrm{s}.$
 - ▶ Disconnect one SINGLE voltage sense wire, if any wires used.
- 90 $\bigcirc\,$ The AMS must open the shutdown circuit within $0.5\,\mathrm{s}.$
 - ▶ Disconnect one SINGLE temperature sense wire, if any wires
- used.
- 91 $\bigcirc\,$ The AMS must open the shutdown circuit within $1\,\mathrm{s}.$
 - Ask the team to connect their laptop to the AMS.
- ► Connect charger to battery/batteries, start charging process.
- 92 O Cell voltages can be displayed.
- 93 O Cell temperatures can be displayed.
- 94 O Plausible accumulator current can be displayed.

☐ INDICATOR LIGHT OR VOLTMETER AND TSAL GREEN LIGHT INDICATOR

- 95 \bigcirc Red indicator light or voltmeter installed
- 96 O Marked with "Voltage Indicator"
- 97 O Visible while opening the battery connector.
- 98 O Hard wired electronics, supplied by TS
 - ► Activate LVS
- 99 O TSAL green light indicator on.

- 100 O Green and easily visible.
 - \blacktriangleright Connect power supply with $60\,\mathrm{V\,DC}^{\,4}$ to accumulator TS connector. Use proper plugs, no measuring probes.
- 101 O Indicator light on or voltmeter showing present TS voltage.
- 102 O Indicator light continuously on with same brightness.
- 103 O Visible in bright sunlight.
- 104 \bigcirc TSAL green light indicator off.

³max. TS voltage

 $^{^460\,\}mathrm{V}$ or half the nominal tractive system voltage, whichever is lower

DRIVERLESS - copy for Formula Student Germany

 $M\Omega$

 $M\Omega$

☐ CLOSE ACCUMULATOR CONTAINER

105 O All ASES checks have been performed

Install maintenance plugs, close container housing

106 O Seal accumulator container

☐ INSULATION MEASUREMENT TEST

- Check low resistance connection between LV ground MP and PE/casing
- \blacktriangleright Choose test voltage to $500\,V.$ 5
- Connect insulation tester to charger TS+ and LV ground.
- Connect charger (do not activate charger) to accumulator, keep AIRs opened.
- \blacktriangleright Measure resistance: $R_{\rm iso+}$ =
- 107 $\bigcirc\,$ Resistance is much higher than $315\,\mathrm{k}\Omega$ $^{\mathrm{6}}.$
 - ► Connect insulation tester to TS- and LV ground.
- ► Measure resistance: $R_{\rm iso-}$ = 108 \bigcirc Resistance is much higher than $315\,{\rm k}\Omega$ ⁶.
- 109 O Resistances are nearly equal.

☐ CHARGER SHUTDOWN CIRCUIT

- Connect charger to battery/batteries, start charging process
- 110 O Voltage indicator shows that HV is present
 - Press shutdown button
- 111 O AIRs open
- 112 \bigcirc Voltage indicator shows voltage <60 V

- Start charging, unplug TS accumulator connector
- 113 O AIRs open.
- 114 O Charger disabled, no voltage at charger connector
 - Reconnect TS accumulator connector
- 115 O Charger stays off, no voltage at TSMPs

☐ INSULATION MONITORING DEVICE

- ightharpoons $R_{\mathrm{Test}} = 120 \,\mathrm{k}\Omega^{7}$
- \blacktriangleright Activate charger output, connect R_{Test} between TS+ and LV GND.
- 116 \bigcirc Shutdown circuits opens within $30 \, \mathrm{s}$.
- 117 \bigcirc TS voltage decreases below $60\,\mathrm{V\,DC}$ within $5\,\mathrm{s}$ after shutdown circuit opens.
- 118 \bigcirc Reactivation of charger output is not possible.

- ► Push the reset button, if any.
- 119 O Reactivation of charger output is not possible.
 - ightharpoonup Remove R_{Test} . Wait $40\,\mathrm{s}$ until IMD resets status output.
- 120 O Reactivation of charger output is not possible.
 - \blacktriangleright Activate TS, connect R_{Test} between TS- and LV GND.
- 121 O Shutdown circuits opens within 30 s.

 $[\]begin{array}{ll} 5 & U_{max} \leq 250\, V_{DC} & U_{m} \\ & U_{Test} = 250\, V_{DC} & U_{T} \end{array}$

 $[\]begin{array}{l} U_{max} > 250\,V_{DC} \\ U_{Test} = 500V_{DC} \end{array}$

 $^{^6 \}mathrm{Minimal}$ Resistance = $500\,\Omega/\mathrm{V}\cdot V_{\mathrm{max}}$ + BPR

 $^{^7}R_{\mathrm{Test}}$ = (max. TS voltage \cdot 250 Ω/V) - BPR

DRIVERLESS - copy for Formula Student Germany

☐ ASES - ACCUMULATOR CONTAINER	
 ▶ Team must show approved ASES for accumulator container. ▶ Team must show ASES test samples for accumulator container if alternative materials are used. 	125 Cells securely fastened towards all 3 directions. Minimal play only for form-fitting solutions. 126 Tabs of pouch cells must not carry mechanical loads.
22 Accumulator container manufactured according to ASES. Appropriate material and bonding quality.	127 All parts carrying cells and loads: UL94-V0 certified materials 128 External openings not pointing towards driver or hand cart op
23 O Internal vertical walls have to be rigidly fastened to the con-	erator.
tainer. Extend to the lid.	129 Check if all parts and the cover/lid of the housing are rigidly
24 \bigcirc Holes in container only for wiring harness, ventilation, cooling or fasteners, if mechanical properties are not influenced and max 25% . AIRs and main fuse separated from cells, no holes in separation.	fastened. 130 All used fasteners must be secured by the use of positive lock ing, except non-conductive and non-structural fasteners.

>	Connect insulation tester to TS+ and GND	>	Measure resistance: $R_{\rm iso-}$ = $M\Omega$
	Measure resistance: $R_{\rm iso+}$ = $M\Omega$		Resistance is much higher than $315\mathrm{k}\Omega$ 11
248 🔾	Resistance is much higher than $315\mathrm{k}\Omega$ 11	250 🔾	Resistances are nearly equal

 $\begin{array}{c} \hline 92 \text{ x Body Protection Resistor (BPR)} \\ 10 & U_{max} \leq 250 \, V_{DC} & U_{max} > 250 \, V_{DC} \\ & U_{Test} = 250 \, V_{DC} & U_{Test} = 500 V_{DC} \end{array}$

 $^{11} \mathrm{Minimal~Resistance}$ = $500\,\Omega/\mathrm{V}\cdot V_{\mathrm{max}}$ + BPR

DRIVERLESS - copy for Formula Student Germany

!! TEST AT HIGH VOLTAGE !!

☐ TRACTIVE SYSTEM POWER-UP ► All driven wheels are off the ground, driven wheels removed Press external activation button next to the TSMS ► Connect multimeter between TS+ and TS-255 (TS still deactivated Switch on TSMS with LVMS deactivated Activate TS, measure TS voltage during TS power-up. Use the team's multimeter and test leads. Set multimeter into manual 251 \bigcirc Voltage at TS measurement points $\leq 60 \,\mathrm{V\,DC}$ Switch on LVMS with TSMS deactivated 256 O System is precharged before second AIR closes 252 \bigcirc IMD and AMS indicator illuminate for $1\,\mathrm{s}$ to $3\,\mathrm{s}$ for visible check Switch off TSMS 253 \bigcirc Voltage at TS measurement points $\leq 60 \,\mathrm{V\,DC}$ 257 \bigcirc TS voltage decreases below $60\,\mathrm{V\,DC}$ within $5\,\mathrm{s}$ ► ASMS deactivated, select mission "Manual driving" ► Try to power-up TS with switched off TSMS Switch on TSMS and all shutdown buttons 258 O TS still deactivated Reset any IMD or AMS errors Switch on TSMS 254 O TS still deactivated 259 O TS still deactivated ☐ TRACTIVE SYSTEM SHUTDOWN Connect multimeter between TS+ and TS-261 O Shutdown button left Check first and two more of the following switches, deacti-262 O Shutdown button right vation leads to TS shutdown, the voltage decreases below 263 O Inertia switch $60\,\mathrm{V}\,\mathrm{DC}$ within $5\,\mathrm{s}$ 264 O Break-over-travel-switch 260 Cockpit shutdown button 265 O Interlocks ☐ TRACTIVE SYSTEM ACTIVE LIGHT Max. 75 mm below the highest point of the main hoop and 275 () TSAL is clearly visible (horizontal position, entire illuminated within the roll-over protected envelope (including mounting) 267 Δ Full illuminated surface visible by a person standing $3\,\mathrm{m}$ away Deactivate TS, disconnect TSAC state detection circuitry connector if applicable¹², activate LVS and TS from TSAL $(1.6\,\mathrm{m}$ eye height) 276 O TSAL flashes red and CI is off 268 Δ <10° blocked by main hoop Deactivate TS, reconnect TSAC state detection, disconnect Activate LVS TS from TSAc, connect power supply ${>}60\,\mathrm{V\,DC}$ ¹³ to vehicle 269 O TSAL is green only TS14, activate LVS TS off indicator light . . . 277 O TSAL is both green and red flashing simultaneously and CI is 270 O ... is illuminated green 271 ① ... is inside the cockpit and marked with "TS off" Disconnect power supply, reconnect TS to TSAC, remove 272 ... is visible in bright sunlight HVD, override HVD interlock (!! cover TS potentials !!), activate LVS and TS 273 O ... is visible for the driver 278 O TSAL and CI is off Activate TS ▶ Reinstall HVD 274 \bigcirc TSAL flashes red with frequency $2\,\mathrm{Hz}$ to $5\,\mathrm{Hz}$, and CI is off ☐ INSULATION MONITORING DEVICE 279 One IMD ground line is connected to the accumulator con-Push the reset button which is not accessible to the driver, if tainer¹⁵ and one ground line is connected to the main hoop by any and/or restart LVMS a separate wired connection 287 O Reactivation of TS is not possible $\blacktriangleright~R_{\rm Test}$ = 135 k Ω^{16} \blacktriangleright Remove $R_{\rm Test}$. Wait for $40\,{\rm s}$ until IMD resets status output lacktriangle Activate TS, connect R_{Test} between TS+ and GND 288 (Reactivation of TS is not possible 280 O Shutdown circuits opens within 30 s Push all reset buttons in the cockpit, if any 281 \bigcirc TS voltage decreases below $60\,\mathrm{V\,DC}$ within $5\,\mathrm{s}$ after shut-289 Reactivation of TS is not possible down circuit opens Push the IMD reset button which is not accessible to the driver, • IMD indicator light ... 282 O ... is illuminated red 290 O Reactivation of TS is possible 283 ... is inside the cockpit and marked with "IMD" ▶ Push and hold the reset button which is not accessible to the 284 O ... is visible in bright sunlight, even from outside driver, if any 285 () ... is visible for the driver lacktriangle Connect R_{Test} between TS- and GND 291 \bigcirc Shutdown circuits opens within $30\,\mathrm{s}$ Try to activate the TS by the required additional action

286 O Reactivation of TS is not possible

(EV5.11.2)

292 O IMD indicator light illuminates

 $^{^{12}\}mbox{Skip}$ test if disconnecting the connector also opens the interlock and/or stops LVS supply

 $^{^{13}25\,\}mathrm{V}\,\mathrm{AC}\,\mathrm{RMS}$ equal $42.5\,\mathrm{V}\,\mathrm{DC}$ when the signal is sinusoidal

¹⁴Do not use measuring points. The team needs to provide a method of connection that

uses the same receptacles as used for TSMP

¹⁵or the IMD's enclosure

 $^{^{16}}R_{\mathrm{Test}}$ = (max. TS voltage $\cdot~250\,\Omega/\mathrm{V})$ - BPR

DRIVERLESS - copy for Formula Student Germany

☐ READY TO DRIVE ACTIVATION SEQUENCE

Activate TS, press torque pedal

293 O No turning of motors

► Let the team set the vehicle to ready-to-drive mode

294 O Pressing brake pedal WHILE activating is necessary

▶ Repeat the activation sequence, but push the brake pedal only once before finally pushing the activation button

295 O No ready-to-drive mode possible

Disconnect the brake sensor

296 O No ready-to-drive mode possible

297 $\bigcirc\,$ Ready to drive sound duration is $1\,s$ to $3\,s$ continuously

298 Δ Ready to drive sound is min $80\,\mathrm{dBA}$ ($2\,\mathrm{m}$ around the vehicle) 299 \bigcirc Ready to drive sound is easily recognizable and no animal

sound or song part

☐ APPS AND BSPD

► Set vehicle to ready to drive state

▶ Disconnect >50 % of APPS

► Move the accelerator pedal over the entire pedal travel

300 O Motors do not turn

▶ Disconnect all APPS

► Move the accelerator pedal over the entire pedal travel

301 O Motors do not turn

 \blacktriangleright Team simulates $5\,kW$ power (complete BSPD circuitry must be used), press brake representing hard braking ($>\!0.5\,s)$

302 O TS shuts down

303 \bigcirc Reactivation of TS is only possible after $10\,\mathrm{s}$ without implausibility

 \blacktriangleright Reactivate TS. Disconnect the current sensor, press brake representing hard braking $(>\!0.5\,\mathrm{s})$

304 O TS shuts down

☐ TIS STATUS UPDATE (E-INSPECTION)

► Set online TIS status (E-Inspection) to Passed or Failed

DRIVERLESS - copy for Formula Student Germany

☐ TIS STATUS UPDATE (D-INSPECTION)

Set online TIS status (D-Inspection) to Present

☐ COMMENTS

► Check comments (Driverless) from first page

☐ AUTONOMOUS SYSTEM STATUS INDICATORS (ASSI)

305 \bigcirc Both side ASSIs are mounted behind the driver's compartment, min $160\,\mathrm{mm}$ below the top of the main hoop and $600\,\mathrm{mm}$ above ground.

306 \bigcirc The rear ASSI is mounted on vehicle centerline, min $160\,\mathrm{mm}$ below the top of the main hoop and $100\,\mathrm{mm}$ above the brake

light.

307 \bigcirc Round, triangle, or rectangular on dark background

308 Δ $15\,\mathrm{cm^2}$ minimum illuminated area *OR* LED strips with a total length $>\!150\,\mathrm{mm}$ with elements $<\!20\,\mathrm{mm}$ apart

☐ REMOTE EMERGENCY SYSTEM (RES)

309 O Remote Emergency System installed

310 O Rigidly mounted to the chassis

Check, if RES bypass is implemented correctly

(as per ASF-Form "Actuator Power Supply")

311 O RES bypass is implemented as described in the ASF

312 O Correct safety relay (manufacturer and type) is used

☐ AUTONOMOUS SYSTEM BRAKE (ASB)

 Compare implementation in vehicle to ASF (Forms: "EBS Concept Overview" OR "EBS Mechanical System")

313
Autonomous System Brake is identical to the system described in the ASF

314 O No more than two release points are used

315 The release points are protected against unintended actuation, e.g. by design, additional separator or frame

316 All release points are in proximity to each other and are either mounted in proximity to the ASMS or on the top side of the vehicle between front bulkhead and front hoop close to the vehicles center line

317 Δ The release points are operable by maximum two simple push/pull and/or turning actions, the order and direction of these actions are shown next to the deactivation points

318 Δ The release points are marked with "brake release"

☐ AUTONOMOUS SYSTEM TEST

► Switch on the LVMS and select the inspection mission

▶ Disable Race E-Key frequency of RES (Set race mode switch next to AMI to position opposite to "R")

319 O The ASSIs remains off

Switch on the ASMS and the TSMS

320 Activating the TS using the cockpit activation button is not possible

► Activate the TS via the external activation button

 $\blacktriangleright\,$ Press RES "Go" button within $5\,\mathrm{s}$ after "AS Ready"

322 O "AS Driving" (ASSIs flashing yellow) has not been entered

323 O Vehicle is still not in R2D

324 Δ Autonomous Mission Indicator (AMI) is easily readable and shows the correct mission

325 Δ All 3 (yellow) ASSIs are clearly visible in very bright sunlight. At least one ASSI is visible from any angle of the vehicle

326 Δ Brakes are closed at least on one axle (check brake light)

► Press the RES "Go" button.
!! CAUTION WHEELS AND STEERING SYSTEM

!! CAUTION WHEELS AND STEERING SYSTEM ARE MOV-ING !!

327 \bigcirc The ASSIs start flashing yellow ("AS Driving")

328 O Drivetrain is slowly (!! LIMIT RPM !!) spinning and steering system is moving

▶ Wait for the transition from "AS Driving" to "AS Finished"

329 \bigcirc The ASSIs light up in blue continuously within $25\,\mathrm{s}$ to $30\,\mathrm{s}$ and brakes are engaged ("AS Finishes"). ASSIs must not start flashing

330 Δ All 3 (blue) ASSIs are clearly visible in very bright sunlight

331 O TS is deactivated

- Turn off the ASMS and release the Brakes via the deactivation points
- 332 O Brakes are disengaged, manual steering is possible, ASSI is off
 - ► Re-enter "AS Ready" state

Press one shutdown button

333 O ASSIs start flashing blue ("AS Emergency")

334 O Brakes are closed

335 \bigcirc Intermittent sound for $8\,\mathrm{s}$ to $10\,\mathrm{s}$ ($1\,\mathrm{Hz}$ to $5\,\mathrm{Hz}$, $50\,\%$ duty cycle)

336 Δ Sound level is min $80\,\mathrm{dBA}$ ($2\,\mathrm{m}$ around the vehicle)

337 O TS is deactivated

 Turn off ASMS and release brakes (manual actions may be required)

► Re-enter "AS Driving" state with inspection mission selected, before each of the following tests

▶ 1. Press RES 2. Switch off the ASMS

338 O TS is deactivated

339 \bigcirc Transition to "AS Emergency", ASSI is blue flashing, brakes are closed and intermittent sound for $8\,\mathrm{s}$ to $10\,\mathrm{s}$

➤ Test all operating errors (e. g. manual valves) and some (choose randomly 1 to 3) ASB failure modes (e.g. disconnect sensors/energy supply/pneumatics/hydraulics...)

340 O System has detected a failure

341 O When ASSI is "AS Ready" or "AS Driving" state, the system enters "AS Emergency"

342 Δ Race mode switch is installed in proximity to AMI

► Enter "AS Ready" state

► Enable Race E-Key frequency (Set race mode switch to position "R")

343 O ASSIs start flashing blue ("AS Emergency")

☐ TIS STATUS UPDATE (D-INSPECTION)

If ALL driverless checks from mechanical inspection (page 19) are passed as well: Set online TIS status (D-Inspection) to Passed or Failed

DRIVERLESS – copy for Formula Student Germany

DRIVERLESS - copy for Formula Student Germany

PART VI: MECHANICAL INSPECTION

The time limit for this part of the inspection is 75 minutes. Continuation of the inspection is possible after requeueing. During technical inspection all work carried out on the vehicle must be approved by a technical inspector.

☐ TIS STATUS UPDATE (M-INSPECTION)

➤ Set online TIS status (M-Inspection) to Present

Write down inspector names legibly, sign only when passed

☐ COMMENTS

► Check comments from first page

☐ VEHICLE WITH TALLEST DRIVER READY TO RACE

- 344 O PUSH BAR (red color) Securely attached to vehicle, detachable, push & pull function for 2 people. University must be written on. Two pair of HV gloves in protecting case and multimeter must be installed. The inspection sheet must always stay with the push bar.
- 345 Δ CAMERAS Secured by two points, see T13.5. No helmet-mounted cameras.
- 346 AUTONOMOUS SYSTEM SENSORS Sensors may not come into contact with the driver's helmet when normally seated.
- 347 \(\Delta \) VISIBILITY Minimum 100° field of view each side. Head rotation or mirrors allowed; mirrors firmly installed and adjusted.
- 348 Δ VEHICLE CONTROLS All controls, including shifter, must be inside cockpit. No arms or elbows outside the SIS plane.
- 349 ORIVER FLUID PROTECTION Rigidly mounted firewall (or heat resistant cover for cooling systems using plain water (except wheel motors and their cooling hoses)). For points less than 100 mm above the bottom of the tallest driver's helmet, the firewall must extend sufficiently far upwards and/or rearwards to prevent a direct line of sight to: cooling system and low voltage battery.
- 350 ROLL BAR PADDING Must cover areas that could be hit by the driver's helmet with 12 mm thick, SFI spec 45.1 or FIA 8857-2001 padding.
- 351 Δ **OTHER SIDE TUBES** Design must prevent driver's neck from hitting bracing or side tubes.
- 352 O HEAD RESTRAINT- Near vertical. Must take 890 N load.

- 40 mm thick, SFI 45.2 standard. Max. 25 mm from helmet. Helmet contact point 50 mm min. from any edge. May be changed for different drivers. Minimum 150x150 mm.
- 353 O DRIVER RESTRAINT HARNESS SFI 16.1, SFI 16.5, SFI 16.6, FIA 8853/2016. 6- or 7-point system Two-piece lap belt (min. width 50 mm), two shoulder straps (min. width 75 mm) and two leg or anti-submarine straps (min. width 50 mm). (7-point system must have three anti-submarine straps). Must be securely attached to prim. structure (25.4 x 2.4 mm or equal.).
- 354 C LAP BELT MOUNTING Pivoting mounting with eye bolts or shoulder bolts attached securely to primary structure. Min. tab thickness 1.6 mm. Attachment brackets to the monocoque must be steel, see T4.5.5.
- 355 LAP BELT POSITIONING Must pass over pelvic area between 45 65 deg. to horizontal for upright driver, 60-80 deg. for reclined. The lap belts must not be routed over the sides of the seat.
- 356 SHOULDER HARNESS MOUNTING Mounting points 180 230 mm apart (measured center to center). Attached to primary structure 25.4 x 2.4 mm or 25.0 x 2.5 mm steel tube min. NOT to put bending loads into main hoop bracing without extra bracing. Additional braces if not straight to main hoop. Cannot pass through a firewall. Attachment brackets to the monocoque must be steel.
- 357 \(\Delta \) SUSPENSION Fully operational with dampers front and rear; 50 mm minimum wheel travel (minimum jounce of 25 mm) with driver in vehicle.

☐ VEHICLE WITHOUT DRIVER

- 358 Δ TECH STICKER SPACE $45\,\mathrm{mm}$ x $175\,\mathrm{mm}$ on centerline of front of vehicle in front of the cockpit opening
- 359 Δ SCHOOL NAME & OTHER DECALS School name, or recognized initials min. 50 mm tall (all letters). on both sides in roman letters. Must be clearly visible.
- 360 A VEHICLE NUMBERS On front & both sides of vehicle, minimum 150 mm tall, 20 mm stroke & spacing, 25 mm min. between number and background edge, black on white, white on black only, specified background shapes. Must be clearly visible, font: Roman Sans-Serif characters.
- 361 A BODYWORK EDGES edges that could contact a pedestrian must have a minimum radius of 1.0 mm (safety requirement).
- 362 Δ BODY & STYLING Open wheeled, open cockpit, formula style body. Vertical keepout zones 75 mm in front and behind tires (no aero exceptions), tires unobstructed from sides.
- 363 O BODYWORK Min. 38 mm radius on nose. No large openings in bodywork into driver compartment in front of or along-side driver, (except cockpit opening). In any side view in front of the cockpit opening no external concave radii (exception T8.2).
- 364 AERODYNAMIC DEVICES Securely mounted. The deflection may not exceed 10 mm when a force of 200 N is applied over a surface of 225 cm² and not more than 25 mm when a point force of 50 N is applied.
- 365 Δ **AERODYNAMICS** ALL aerodynamic devices maximum 250 mm rearward of rear tires, maximum 700 mm forward of front tires. Devices lower than 500 mm from the ground rearward

- of the front axle must be no wider than vertical plane from the outside of the front and rear tires. Devices higher than 500 mm behind the front axle must not be wider than the inside of the rear tires.
- 366 \(\Delta\) AERO VERTICAL HEIGHT Devices forward of a vertical plane through the rearmost portion of the front face of the driver head restraint support, excluding any padding, set to its most rearward position, must be lower than 500 mm from the ground. Rear device max 1.2 m above ground (incl. end plates); Front device max 250 mm above ground outside of the inside plane of the front tires inside this plane max 500
- 367 EDGES/RADII Edges that could contact a pedestrian must have a minimum radius of: forward facing edges min 3 mm; all other edges min. 1 mm.
- 368 Δ SEAT Insulated against heat conduction, convection and radiation. Lowest point no lower than top of of the upper surface of the lowest SIS member OR must have longitudinal, 25.4 x 1.65 mm steel tube underneath.
- 369 OCCKPIT OPENING Fig. 11 (left) template passes down from above cockpit to below the upper side impact member. Steering wheel, seat & padding can be removed. No removing of firewall.
- 370 COCKPIT INTERNAL CROSS SECTION Fig. 11 (right) template passes from the cockpit opening to 100 mm rear of rearmost pedal contact area (in most forward position). Steering wheel and paddings can be removed (without tools).

DRIVERLESS - copy for Formula Student Germany

371 \(\Delta \) STEERING WHEEL - Continuous perimeter, near round (no concave sections) with driver operable quick disconnect. 250

mm max from front hoop.

☐ REMOVE BODY PANELS

- 372 JACKS Up to two devices that lift up all driven wheels min. 100 mm above the ground. In lifted position it is safe to enter and exit the vehicle and the devices must not extend out of the vehicles projected surface area. University name must be written on. Vehicle pickup points must be indicated by orange triangles.
- 373 O DRIVER'S LEG PROTECTION Covers inside of cockpit over any sharp edges or moving suspension / steering components.
- 375 **PERCY** Helmet of 95th percentile male (PERCY) including 50 mm clearance must be below the lines between top of front and main roll hoops and between top of main hoop to rear attachment point of main hoop bracing. Center of bottom circle placed minimum 865 mm from pedals.
- 376 BRAKES Dual hydraulic system & reservoirs, operating on all four wheels, (one brake on limited slip differential is OK). System must be protected by structure or shields from driv-

etrain failure or minor collisions. No plastic brake lines. No brake-by-wire. No parts below chassis in side view. Brake pedal capable of 2000 N, no failures if official exerts max force (seated normally in vehicle).

- 377 Δ BRAKE OVER TRAVEL SWITCH In the event of a failure in one or both of the brake circuits the brake pedal over travel will result in the shutdown circuit being opened.
- 378 WHEELS 203.2 mm (8") min. diam. No aluminium or hollow wheel bolts. Single retaining nut must incorporate a device to retain the nut. Aluminum wheel nuts must be hard anodized.
- 379
 RIM CLEARANCE The radial clearance between any nonrotating part and the inside of the rim must be at least 5 mm
 in static condition at any steering angle and any ride height.
- OFIREWALL Fire resistant material; must separate driver compartment from cooling, oil system & LV battery. Passthroughs OK with grommets. Multiple panels OK if gaps sealed. No gaps at sides or bottom. Must be rigidly mounted to the chassis. Material must meet UL94-V0, FAR25 or equivalent. On tractive side min. 0.5 mm aluminium plate grounded, on the driver side a rigid insulating layer (no CFRP) UL94-V0 or equivalent should be installed that can withstand a 250 N 4 mm screwdriver penetrating test.

☐ SES, IAD & REQUIRED TESTS PRESENTED

- 381 O SES TUBING & MATERIALS Team must show an AP-PROVED SES. No magnesium tubes in primary structure.
- 382 SES TEST SPECIMEN Team must show all relevant test specimen. Labled (non-removable) with structure acronym and date. Speciment width, skin & core thickness according to SES.
- 383 INSPECTION HOLES 4.5 mm inspection holes required in non-critical areas of front & main hoops. Must be accessible with standard calliper. Inspectors may ask for holes in other tubes and/or structures.
- 384 SES DIMENSIONS & THICKNESSES All chassis dimensions according to SES: tube diameter and wall thickness; laminate skin thickness, core thickness, panel height.
- 385 O HOLES & CUTOUTS All holes/cutouts in primary structure < 60 mm² or deducted from panel height.
- 386 LAMINATE ORIENTATION Tested structures must be correctly oriented or quasi-isotropic (T3.5.4, especially MHBS).
- 387 ⊙ BOLTED JOINTS/ATTACHMENTS in primary structure Distance hole centerline to the nearest free edge > 1.5 x hole diameter. Steel backing plates (≥2 mm thick) with perimeter near circular or oval used at attachment points (must be fully supported). According to SES (T3.15.6) if two panels are bolted together.
- 388 HARNESS ATTACHMENTS for shoulder harness, lap belt and anti-submarine belt according to SES calculation, simulation and/or physical test. Test/calculation conducted according to realistic belt angle.
- 389 MAIN HOOP Must be made of one piece and extend to lowest frame member. Above major structure, must be within 10 deg. of vertical plane. Smooth bends without wrinkles, not oval after bending.
- 390 MAIN HOOP BRACING Same material as main hoop (both (non) magnetic). One straight brace on each side. Attached within 160 mm from the top. Min. 30 deg. included angle with main hoop. No bends. No rod-ends. Proper design for

removable braces (capping etc.) on both ends.

- 391 FRONT HOOP Must be closed section metal tube. Can be multi-piece with gussets or additional attachments to the monocoque. Must extend down to lowest frame member. No lower than top of steering wheel. Max. 20 deg. to vertical.
- 392 FRONT HOOP BRACING Two straight forward facing braces, attached within 50 mm of top. Extra rearward bracing required if front hoop leans backwards more than 10 deg.
- 393 FRONT BULKHEAD SUPPORT Upper tube connecting within 50 mm of top of bulkhead, and connecting within 100 mm above and 50 mm below upper SIS tube.
- 394 SIDE IMPACT PROTECTION Upper tube between 240 320 mm above lowest inside chassis point between FH and MH.
- 395 SUSPENSION PICK-UP POINTS Inspected thoroughly for integrity. No crushed core, no skin detacted from core.

- 398 Δ IA POSITION The minimum volume dimensions cannot not be more than 350 mm above ground (measured with driver seated).
- 399 AIP ATTACHMENT Standard: must be welded (full perimeter, size: min. to centerlines) or min. 8 screws M8 grade 8.8 (critical fasteners T10) (size: min. outside dimensions). Nonstandard: Must follow T3.15.6.

□ VEHICLE LIFTED AND WHEELS REMOVED

400 FASTENERS - Steering, braking, harness and suspension systems must use SAE grade 5 or metric grade M8.8 or higher specs (AN/MS) with visible positive locking mechanisms, no adhesive or lock washers. Minimum of 2 exposed threads with lock nuts. Rod ends in single shear are captured by a washer larger than the ball diameter. Adjustable tie-rod ends must have jam nuts to prevent loosening. No nylon lock nuts for brake calipers or brake discs. No button head cap, pan head

DRIVERLESS - copy for Formula Student Germany

or round head screws in critical locations, e.g cage structure or harness mount. Primary structure e/D > 1.5. Snap or retaining rings must not bear any load in non-OEM application (e.g. not for brake disc floaters). Adjustable pedals require at least a positive stop with positive locking.

- 401 STEERING All steerable wheels must have positive stops placed on the rack to prevent linkage lock up or tires from contacting any part of the vehicle. Stationary parts within rollover protection envelope. 7 degrees max. free play at the steering wheel. NO STEER-BY-WIRE on front wheels. Rear wheel steering, max. 6 deg. and mechanical stops installed. Bonded joints in accordance with T3.2.8.
- 402 The steering system has to be fully operational by a driver when ASMS is in "OFF"-Position.
- 403 A FLOOR CLOSEOUT PANEL Required from foot area to firewall; solid, non-brittle material; multiple panels are OK if gaps less than 3 mm.
- 404
 GAS CYLINDERS LOCATION Axis not pointed at driver, within the rollover protection envelope (see FIGURE 2), insulated from any heat source, must be shielded from the driver. The shields must be steel or aluminum with a minimum thickness of 1 mm
- 405 GAS CYLINDERS Proprietary manufacture & labeled, non-flammable gas, regulator on tank, securely mounted, appropriate lines & fittings. Positively retained, i.e. no tie-wraps. Maximum of 10 bar allowed, except cylinders/tanks with directly mounted pressure regulator (-> 10 bar).
- 406 SCATTERSHIELDS INCL. MOUNTING Required for clutches, chains, belts, etc. No holes. 6 mm diam. grade 8.8 minimum. End parallel to lowest part of the sprocket/pulley in front and rear.
- 407 \(\Delta \) SCATTERSHIELD MATERIALS For chains, 2 mm min. thick solid STEEL, 3 x chain width. For belts, 3 mm min. thick Al 6061-T6, 3 x belt width. Finger guards: cover all drivetrain parts that spin while vehicle is stationary. No holes >12 mm dia
- 408 O LV BATTERY Attached securely to frame or chassis.
- 409 O HIGH PRESS HYDRAULICS Pumps and lines must have 1 mm steel or aluminium shields protecting driver and workers.
- 410 O Including all autonomous system high pressure hydraulics like the ASB.
- 411 Δ COOLANT 100% water. NO ADDITIVES WHATSOEVER or oil for electric motors.
- 412 CATCH TANKS Any coolant overflow or lube system vents must have separate catch tanks. 0.9 I minimum each, 100

deg. C material, behind firewall, below shoulder level. 3 mm min. dia. vent away from driver down to the bottom level of frame. Cooling systems using plain water, unless sealed, require 100 ml catch tanks.

- 413 Δ FLUID LEAKS Oil, grease, coolant,Brake fluid -> none permitted
- 415 O ROTATING PARTS Finger guards are required to cover any parts (e.g. fans) that spin while the vehicle is stationary. No holes >12 mm dia.
- 416 C FANS The total rated power of all active devices designed to move air is max. 500W in total.
- 417 ACCUMULATOR CONTAINER POSITION All accumulator containers must lie within the primary structure of the frame lower than the top of the SIS. All accumulator containers must be protected from side, rear and front impact collisions (EV5.5.1, EV5.5.2). If an accumulator container or parts of it are mounted outside of the primary structure an additional impact structure according to T3.14 must be build to protect the accumulator.
- 418 ACCUMULATOR CONTAINER ATTACHMENT Accumulator container must be attached to the primary structure with fasteners min. grade 8.8. Fasteners have to follow T10. Mounting as designed in SES. Brackets 1.6 mm steel or 4 mm aluminium with gussets to withstand bending loads. Monocoque needs 2 mm steel backing plates with perimeter near circular or oval. Equivalent attachment may be according to SES.
- 419 POSITION OF TRACTIVE SYSTEM PARTS All parts belonging to the tractive system must be located within the rollover protection envelope, excluding outboard motors (EV4.4.3).
- 420 PROTECTION OF TRACTIVE SYSTEM PARTS If tractive system parts are mounted in a position where damage could occur from a rear or side impact (below 350 mm from the ground), they have to be protected by a fully triangulated structure with tubes of a minimum outer diameter of 25.4 mm and a minimum wall thickness of 1.25 mm or equivalent.
- 421 MOTOR CASING Min. 2 mm aluminium 6061-T6. May be split into two equal sections. If motor casing is rotating around the stator or is perforated an additional 1 mm aluminium 6061-T6 scatter shield around the motor should be installed.

☐ TIS STATUS UPDATE (M-INSPECTION)

► Set online TIS status (M-Inspection) to Passed or Failed

☐ SENSORS FOR AUTONOMOUS SYSTEM

- 422 CHECK SENSORS Check if all Sensors are fulfilling the legal requirements (mainly radar and laser, e.g. Class 1 Laser Product acc. to IEC 60825-1). The teams must provide the according certifications.
- 423 \bigcirc SENSOR POSITION Sensors must be positioned within the
- surface envelope or the envelope for aerodynamic devices.
- 424 O **SENSOR MOUNTING** Sensors must be securely and rigidly mounted to the vehicle's structure.
- 425 SENSOR COVER Optional covers must be securely mounted to the vehicle's structure.

☐ ACTUATORS FOR AUTONOMOUS SYSTEM

- 426 O **DECOUPLING** Check if the team uses a decoupling mechanism for the brake/steering actuators.
- 427 O PART REMOVAL parts like including bolts, clips, etc. must not be removed for disconnection i.e. they must never loose the physical contact to the disconnection mechanism
- 428 MANUAL OPERATION the disconnection mechanism must not block manual operation of steering/ braking in any position.
- 429 C LOCKING the disconnection mechanism must be securely locked in both positions.

☐ AUTONOMOUS SYSTEM BRAKE (ASB)

- 430 MOUNTING All parts are properly mounted. No lateral forces acting on the pistons of pneumatic/hydraulic actuators.
- 431 Δ **LEAKS** No leaks in pneumatic/hydraulic circuit
- 432 O PUSH-IN FITTINGS None used
- 433 OVERPRESSURE PROTECTION Must have overpressure protection in ASB function critical pneumatic circuits, if parts of the circuit exceed 10 bar.

COMMENTS Check comments from first news	
► Check comments from first page	
☐ DBC FILE	
► Check review status of team's DBC file DBC file check passed	► If failed, do not execute EBS test sequence!
☐ EMERGENCY BRAKE SYSTEM TEST	
► Use the RES dongle.	444 O ASSI is yellow flashing and vehicle accelerates.
 Apply EBS adapter device to team's RES sender, if available. Switch on LVMS and select mission "EBS test". AMI shows the correct mission. 	EBS gets automatically triggered by the EBS adapter device at the brake point. If the EBS adapter device is not available press RES "stop button" when vehicle is at brake point.
Switch on ASMS.	445 O Vehicle has to stop within 10m and has to stay stable.
➤ Activate TS	 446 O Speed at brake point has to be around 40 km/h. 447 O ASSI is blue flashing, intermittent sound is clearly noticeable
142 ASSI is yellow continuous.	for 8 - 10 s.
I43 ○ TSAL is red flashing.Press RES "Go" button.	448 O TSAL is green continuous.
